

Better saddle fit for a healthier horseback -
quality management for the saddle production and adaptation

TOMAX[®]

HORSEBACK SIMULATION TOOL (HBST)

- Definition and production of the correct saddle tree form
- Optimization of the attachment points for the girth straps
- Optimal positioning of the center of gravity
- Dimensioning of the panel
- Shaping of the panel
- Adjustment of the gullet plate
- Easy identification of the right fitting saddle from the stock

The patented **Horseback Simulatin Tool (HBST)** allows to rebuild the horseback and to fit the saddle directly on the rack by use of the data obtained by the uniform national horseback measurement system.

The easily adjustable **Horseback Simulator** generates a three-dimensional, realistic image of the horseback. Thus it is an essential device for saddlers, saddle manufacturers and equestrian

WE SPEAK THE LANGUAGE FOR
THE BENEFIT OF YOUR HORSE
